MONTHLY NOTICES: NOTICE TO AUTHORS

I GENERAL. All papers communicated for publication in *Monthly Notices* are submitted to the scrutiny of referees. There is no page charge for publication in *Monthly Notices*. The Society holds the copyright of all papers published in its Journals.

2 PREPARATION OF PAPERS. Authors are allowed considerable latitude, but they are requested to follow the general style of recent issues of *Monthly Notices*. They should

attend particularly to:

a the provision of a summary of not more than 200 words;

b the division of a paper into sections and, if necessary, sub-sections;

c the annotation of the typescript so as to give the printer all possible guidance in setting the paper, with special reference to ambiguous and unusual symbols, sub- and superscripts, and the placing of diagrams and tables.

d the provision of a title for each table and diagram.

Papers containing extensive tabular, diagrammatic or photographic material will normally be published on microfiche but an extended summary of up to 1000 words will appear in conventional form. The Editors may also recommend that parts of some papers are published on microfiche. Papers which may be suitable for microfiche should be discussed with the Editors at an early stage in their preparation. Guidance for the preparation of microfiche papers is contained in *Monthly Notices* Volume 181 No. 1.

Three copies of each paper should be submitted. One copy should be typewritten double-spaced on one side of the paper only, leaving a one-inch margin on the left-hand side. The other two copies should be in a weight-reduced form such as on flimsy paper, reduced to half size or copied on both sides of the page. The first page of the typescript should contain the full postal address of the author(s) to appear on the paper and the address

to which proofs are to be sent if that is different.

3 DIAGRAMS should be drawn in black ink on tracing material or smooth white board, with a line weight and lettering suitable for reduction to fit the type area of *Monthly Notices*. Drawings for reduction to 1/3, 1/2 or 7/10 of their original size, require line weight and lettering of the following thicknesses and sizes respectively:

ABC abc	ABC abc	ABC abc
1/3	1/2	710

Reductions are linear, and authors are reminded that the space between parts of a diagram as well as lines and lettering, are reduced. Adequate allowance should be made for this to avoid the joining up, during blockmaking, of parts which are close together. If a diagram has to be redrawn a standard charge will usually be made for this service (at present £5.50).

Two rough copies of diagrams should be provided for the use of the Editors and Referees.

4 PHOTOGRAPHS to be reproduced as half-tone plates are acceptable only if they are essential. Glossy unmounted prints should be submitted. Copies are required for the use

of the Editors and Referees.

5 ABBREVIATIONS and references should preferably follow the practice set out in I.A.U. Trans. XII (c) or, if not available in that volume, the World List of Scientific Periodicals.

6 PROOFS. Authors are liable for the cost of alterations in excess of 50p per page. It is therefore in their own, as well as the Society's interest, to seek the maximum conciseness and simplification of symbols and equations consistent with clarity. Proofs should be returned within three days of receipt.

7 SHORT COMMUNICATIONS. These should merit urgent publication and should not, as a rule, exceed 1500 words. Such papers will normally be published between seven and ten weeks after acceptance. The Editors may themselves undertake responsibility for correcting proofs of such papers. Twenty-five offprints will be automatically supplied to the author(s) without charge; additional offprints may be obtained at prevailing rates, provided the order for extra copies is placed when the paper is submitted.

Papers in this category will be included as part of a routine issue of *Monthly Notices*, they will be printed on tinted paper and carry a special pagination which will enable them

to be bound up together at the end of each volume.

Monthly Notices

OF THE R.A.S. VOL. 186 NO.3 MARCH 1979 CONTENTS

- 609 David Branch: On the use of Type I supernovae to determine the Hubble constant
